FT-EZGO

EZGO MAY CAUSE A MILD RANGE DECREASE

Problem: **You may see an intermittent range decrease when you install an EZGO.** This is due to the EZGO antenna interfering with RF Kits.

Fix: Move the EZGO antenna away from the RF Kits antenna placement. **You can also use the EZGO as a standalone unit and or with the Drone with no range decrease.**

Solution: We will be making a hardware change in the near future. **The hardware change will be adding more radio frequency shielding.**

Note: **This is not on all EZGO installs.**

Thank You
